Projects:

#Project 1:

Title: United Airlines Web Application
Client: United Airlines

Description:
Our client is a major United States airline. We developed a web application. Single HTML development.

Role & Responsibilities:
- Analyzing new requirements and developing Web screens based on that using HTML, CSS.

 # Project 2:

Title: HDFC Mobile Application
Client: HDFC

Description:
HDFC mobile banking application consists of many internal applications which do not need user to login to original application but allows user to access several others features using the same CRN number. m-Passbook application is one of its kinds. It acts like a passbook to the user. It will store last 6 months transactions of CASA, FD and RD. It will help to analyzing transaction on category wise. Data will be maintained in the application database as this can be accessed by user both Online and Offline as well.

Role & Responsibilities:
- Develop widgets to display customer data and navigate him to respective screen based on his account details.
- Developed several screens for mobile compatibility using Angular JS, JS, HTML, CSS.
- Handle SQLite data base by integrating native code from both Android and iOS.
- Maintain customer's data both Offline and Online based on the connectivity using encryption and decryptions.
- Allowing customer to categorize his transactions and show graphical representation of that using High charts API.
- Integration of REST services for data validation and data processing.
- Review code using Sonar Lint and fixing them based on severity.
- Interact with Android, iOS databases for offline accessibility of data for the customer.
- Handle defect sheet using JIRA tool using Agile methodology.
- As part of HDFC worked on HDFC Net Banking Bill payments Application also.

Project 3:

Title: Withdrawal's rewrite
Client: Vanguard (U.S.)

Description:
Vanguard is one of the world's largest investment companies (U.S), offering a large selection of low-cost mutual funds, ETFs, advice, and related services. This is for an individual investor or a financial professional, or if we represent a corporate or institutional investor, we can benefit from their expertise, stability and reliable investment approach. Vanguard has a work station which will allow customer to see their work objects which are held like loans and withdrawals etc... But some of them are in JSF. So, aim of this project is to convert withdrawals JSF Pages to Angular 5.

Role & Responsibilities:
- Developed web application for Withdrawals section using Angular 5, HTML, CSS, JS.
- Worked on creating services for getting the data from the Old JSFs.
- Integrated front end angular 5 application with services.
- Tested application using Protractor.
- Hands on experience in using GIT and SVN repositories.
- Test code and review it in Sonar Lint and Jenkins environments.
- Run code from Bit Bucket using Bamboo and check the status of builds generated.
- Converted withdrawals JSF Pages to Angular 5.
- Worked on Defects from SAT Environment. Handled Defects using JIRA Board using Agile methodology.
- Working Experience in Agile Methodology.
- Shared my knowledge to collogues by KT Sessions.
